#### CHEMICAL TESTING

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following tests on solutions:

<u>Test(s)</u>	<u>Technology</u>	<u>Test Method(s)</u>
Volume Tare Addition Tare Subtraction	Gravimetry	310A4512 310A3279
Spectrophotometry Absorbance	Spectrophotometer	310A3232 310A3501

<sup>1</sup> This laboratory offers commercial calibration service and calibration service for Artel PCS Instruments and Artel PCS Calibration Kits and syringes.

<sup>2</sup> Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of  $k = 2$ . The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

<sup>3</sup> Field calibration service is available for this calibration. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g. resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.

<sup>4</sup> CMC values for Gravimetric and Photometric Volume Determination do not account for uncertainty due to Unit Under Test imprecision (UUT) or Intra-Laboratory variability (repeatability and reproducibility between operators), ILAC P-14:09/2020. per clause 4.3 Note 3

<sup>5</sup> This scope meets A2LA's *P112 – Flexible Scope Policy*.

<sup>6</sup> Environmental specifications, specified in documentary standards, may not be achievable during field calibration at customer facilities.

# Accredited Laboratory

A2LA has accredited

**ARTEL LABORATORY**

*Westbrook, ME*

for technical competence in the field of

**Calibration**

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 *General requirements for the competence of testing and calibration laboratories*. This laboratory also meets the requirements of ANSI/NCSL Z540-1-1994 and R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communiqué dated April 2017).

Presented this 28<sup>th</sup> day of December 2023.
